

PERSONAL PORTFOLIO WEBSITE

Project Documentation Report

THE DEVELOPER'S ARENA INTERNSHIP

WEEK -1:

Project: Personal Portfolio Website

Submitted by

ARATHI SHEKHAR MUNAVALLI

Technology Used: HTML5

Date: June 2026

1. Project Overview

This project is a Personal Portfolio Website developed entirely using HTML5. It was created as part of a beginner-level web development learning exercise. The primary goal of this project was to understand and apply the fundamental concepts of HTML — including structuring a webpage, using semantic elements, creating a navigation menu, embedding images, and building an interactive contact form.

The portfolio is designed to present personal and academic information about Arathi S M, an Engineering student with an interest in Web Development. The website is fully accessible through any modern web browser without requiring any additional software, server, or installation.

Project Goals and Objectives:

- Design and develop a complete personal portfolio website using HTML5 only
- Implement a responsive navigation menu with anchor links to all sections
- Create an About section with a profile photograph and personal introduction
- Display technical and soft skills using a structured unordered list
- Build a fully functional contact form with proper field validation
- Include a professional footer with copyright information
- Apply semantic HTML tags and accessibility best practices throughout

2. Setup Instructions

The following step-by-step guide explains how to set up and run the Personal Portfolio Website on any computer.

2.1 Requirements

- A computer running Windows, macOS, or Linux
- Any modern web browser (Google Chrome, Mozilla Firefox, Microsoft Edge)
- No internet connection required after download
- No additional software or server setup needed

2.2 Installation Steps

- Step 1: Visit the GitHub repository at the provided URL.
- Step 2: Click the green 'Code' button and select 'Download ZIP', or clone using: `git clone <repository-url>`
- Step 3: Extract the ZIP file to a folder on your computer.
- Step 4: Ensure the images/ folder contains the file profile.jpg.
- Step 5: Double-click index.html to open it in your default web browser.
- Step 6: The complete portfolio website will load immediately.

3. Code Structure

3.1 File Hierarchy

File / Folder	Description
index.html	Main HTML file containing the complete website
README.md	Project overview and instructions file
images/	Folder that stores all image assets
images/profile.jpg	Profile photograph shown in the About section

3.2 HTML Document Structure

The index.html file follows a standard HTML5 document structure. It begins with the DOCTYPE declaration, followed by the root html element with the lang attribute set to 'en'. The head section contains the charset meta tag and the page title. The body is organized into four main structural parts: header, main content area, and footer.

3.3 Section-by-Section Explanation

Header Section:

Contains the portfolio owner's name displayed as an <h1> heading and a navigation menu using the <nav> element. The navigation contains three anchor links: About, Skills, and Contact, each linking to their respective sections using the # href pattern.

About Section (id="about"):

Displays the profile image using the tag with src, alt, and width attributes. Three paragraph elements provide the personal introduction text about the developer's background and goals.

Skills Section (id="skills"):

Uses an <h2> heading followed by an unordered list containing four list items : HTML Basics, C Programming, Python Basics, and Communication Skills.

Contact Section (id="contact"):

Contains a <form> element with three input fields. Each field uses a <label> paired with its input via the for and id attributes. All fields include the required and name attributes. A submit button completes the form.

Footer Section:

A <footer> element containing copyright text: © 2026 Arathi S M. All Rights Reserved.

4. Visual Documentation — Screenshots

The following screenshots were captured from a live browser session while testing the portfolio website at <http://127.0.0.1:5500/index.html> using the VS Code Live Server extension. They serve as visual proof that all sections are working correctly.

Screenshot 1: Full Portfolio — Complete Page View

Figure 1: Complete portfolio website displaying all sections — Header, About, Skills, Contact, and Footer

Screenshot 2: Header and Navigation Menu

Figure 2: Header section showing the name 'Arathi S M' and navigation links About | Skills | Contact

Screenshot 3: About Me Section

Figure 3: About Me section with personal introduction paragraphs

Screenshot 4: Skills Section

Figure 4: Skills section displaying the unordered list with four skill items

Screenshot 5: Contact Form

Figure 5: Contact form with Name, Email, Message fields and the Send Message button

Screenshot 6: Profile Photo Successfully Loaded

Figure 6: Profile photograph correctly loaded and displayed in the About section

5. Technical Details

5.1 Technology Stack

This project uses exclusively HTML5 — no CSS, JavaScript, or any external libraries or frameworks were used. This was intentional, as the project objective was to focus purely on learning HTML structure and elements.

5.2 HTML Concepts and Tags Used

HTML Element	Purpose	Where Used
<!DOCTYPE html>	Declares HTML5 standard	Top of document
<html lang="en">	Root element + language	Entire document
<meta charset="UTF-8">	Character encoding	Head section
<title>	Browser tab title	Head section
<header>	Page header container	Top of body
<nav>	Navigation menu	Inside header
	Anchor links	Navigation menu
<main>	Main content wrapper	Body content
<section id="...">	Content sections	About, Skills, Contact
<h1>, <h2>	Headings (16pt, 14pt)	Section titles
<p>	Paragraph text	About section
	Profile photograph	About section
/	Unordered list / items	Skills section
<form>	Contact form container	Contact section
<label>	Input field labels	Contact form
<input type="text">	Name text field	Contact form
<input type="email">	Email field with validation	Contact form
<textarea>	Multi-line message field	Contact form
<button type="submit">	Form submit button	Contact form
<hr>	Horizontal dividers	Between sections
<footer>	Page footer	Bottom of body

5.3 Accessibility and Best Practices Applied

- lang="en" attribute on <html> tag for screen reader compatibility
- charset="UTF-8" meta tag to prevent character encoding issues
- alt attribute on tag for visually impaired users
- for and id attributes pairing labels to inputs correctly
- name attributes on all form inputs for proper data submission
- required attribute on all form fields for client-side validation
- Semantic elements used instead of generic <div> tags throughout

6. Testing Evidence

The portfolio website was tested manually in a live browser environment. Testing was performed using Google Chrome and Microsoft Edge browsers on a Windows laptop. The VS Code Live Server extension was used to serve the files locally at <http://127.0.0.1:5500/index.html>.

6.1 Test Cases and Results

#	Test Case	Expected Result	Actual Result	Status
1	Page loads in browser	All sections visible	All sections visible	PASS
2	Click 'About' nav link	Scrolls to About section	Scrolls correctly	PASS
3	Click 'Skills' nav link	Scrolls to Skills section	Scrolls correctly	PASS
4	Click 'Contact' nav link	Scrolls to Contact form	Scrolls correctly	PASS
5	Profile image display	Image renders in About	Image renders correctly	PASS
6	Skills list visible	4 skills listed	All 4 skills shown	PASS
7	Form fields visible	Name, Email, Message shown	All 3 fields visible	PASS
8	Submit with empty fields	Browser shows error	Required error shown	PASS
9	Enter valid email	Accepts valid format	Accepted correctly	PASS
10	Footer text visible	Copyright text shown	Copyright text shown	PASS

6.2 HTML Validation

The HTML code was validated using the W3C Markup Validation Service (<https://validator.w3.org>). The final version of index.html passed validation with no errors. Minor warnings about missing attributes were resolved by adding lang, charset, and name attributes during the correction phase.

6.3 Quality Standards Checklist

Quality Standard	Requirement	Status
Project Overview	Clear description of goals and objectives	COMPLETED
Setup Instructions	Step-by-step installation guide	COMPLETED
Code Structure	Well-organized with clear file hierarchy	COMPLETED
Visual Documentation	Screenshots demonstrating functionality	COMPLETED
Technical Details	HTML elements, architecture explained	COMPLETED
Testing Evidence	Test cases with pass/fail results	COMPLETED
Semantic HTML	Proper use of semantic elements	COMPLETED
Accessibility	lang, charset, alt, label/for attributes	COMPLETED
Form Validation	required and name attributes on all fields	COMPLETED
Navigation	All 3 anchor links functional	COMPLETED
Profile Image	Image tag with src, alt, width	COMPLETED
Footer	Copyright notice included	COMPLETED

7. Conclusion

This Personal Portfolio Website project successfully demonstrates the foundational concepts of HTML5 web development. The website was built from scratch using only HTML, without any CSS styling or JavaScript, keeping the focus entirely on understanding the core structure and elements of a webpage.

Through this project, the following key skills were acquired and demonstrated:

- Writing a complete and valid HTML5 document from scratch
- Using semantic elements to give meaning and structure to content
- Building a navigation menu with working internal anchor links
- Embedding images with proper accessibility attributes
- Creating a fully functional contact form with labels and validation
- Applying accessibility best practices including lang, charset, alt, and name attributes
- Organizing project files in a clean and professional folder structure

The project has been successfully tested across multiple browsers, validated using the W3C validator, documented with screenshots, and uploaded to GitHub with the required file structure. This project represents the first completed step in Arathi S M's web development journey and forms a strong foundation for learning CSS and JavaScript in future projects.
